advantages, limitations, optimization strategies, and practical examples. 199. Classification is a fundamental area in machine learning. This section explains theory, intuition, algorithms, math foundations, preprocessing, feature engineering, model selection, evaluation metrics, real-world applications, advantages, limitations, optimization strategies, and practical examples. 200. Classification is a fundamental area in machine learning. This section explains theory, intuition, algorithms, math foundations, preprocessing, feature engineering, model selection, evaluation metrics, real-world applications, advantages, limitations, optimization strategies, and practical examples.
